List Comprehensions

```
map f xs = [ f x | x <- xs ]
filter p xs = [ x | x <- xs, p x ]
xs = [ (x, y) | x <- xs, y <- ys ] = Cartesian product of two lists
= nested lists

                                    = For each value in xs, go
through every value                                        in ys
```
